

Curious about the benefits of Renewable Energy? Battery Storage? Microgrids?

Our team can help you explore these and other Distributed Energy Resources (DERs) to determine if they are right for you! Kinect Energy has partnered with AESI to offer an Electric Supply Evaluation – a utility-specific analysis – that will help you better understand the possibilities of distributed energy technologies.

What are your goals?

- ▼ Lower cost
- ▼ Improved reliability
- ▼ Increased resilience
- ▼ Long term price stability

What we deliver!

- ▼ One or more DER solutions to consider to meet your objectives
- ▼ Quantified results by providing an estimate of the costs to implement and the savings in comparison to managing status quo
- ▼ Written report summarizing our findings

Next steps...

- ▼ Share your long-term facility plans, financial goals, reliability & resiliency needs, risk tolerance and sustainability goals
- ▼ Let us evaluate your current energy cost, consumption, reliability & resilience
- ▼ Together we will determine if these energy technologies can work for you and if so, identify a suggested mix of technologies to meet your objectives!

Why hire us?

After serving utility and C&I clients in North America, Europe and beyond for over 30 years, we are experts in:

- ▼ Electric & Natural Gas Markets
- ▼ Generation, Transmission and Distribution Design
- ▼ Cyber Security
- ▼ Power System Operations
- ▼ Distributed Energy Resources:
 - Solar & Wind
 - Battery Storage
 - Microgrids
 - CHP & Backup Generation
