

Services provided to ethanol customers

- Expert supply management ensuring the best-possible pricing and reliability
- Risk management services (basis, futures, fixed price supply)
- Energy evaluation services (pipelines, onsite fuel systems, substations)
- New facility site development and upgrading of existing facilities
- Project consulting – GHG/Sustainability
- Hedging services
- Carbon intensity reduction
- Balancing & logistics

Optimize your ethanol plant's energy management portfolio

Kinect Energy manages each ethanol plant's energy portfolio with best-in-class professional expertise and advice. We deliver comprehensive energy solutions while navigating today's complex energy market landscape. Bottom line strategies allow ethanol plants to consume less and save more on energy, reflecting their individual objectives and risk tolerances.

Our well experienced account management staff understands the needs of our ethanol clients. Kinect Energy actively participates in the activities of Growth Energy, the Fuel Ethanol Workshop (FEW), and the Renewable Fuels Association (RFA).

KINECT ENERGY PROVIDES ENERGY MANAGEMENT SERVICES TO NEARLY HALF OF ALL ETHANOL FACILITIES IN THE UNITED STATES

Natural gas and electric services

Natural gas and electric consulting services have been a core Kinect Energy expertise for two decades. We offer expert supply management and logistical services globally coupled with price risk management, data management and reporting services. Specialized natural gas services include:

- Price monitoring and non-commodity pricing mechanisms
- A full range of advisory services
- Pipeline capacity needs assessment
- Local utility bypass
- We deliver fixed basis, NYMEX, and multi-leg options

If your plant is in a de-regulated electric state, Kinect Energy can help you with third party and wholesale electricity procurement. Even if your plant is in a regulated state, Kinect Energy can help keep your electric costs down with rate analysis and rate negotiations.

Kinect Energy optimizes natural gas and electric spend through effective risk management, managing renewable energy credits and maximizing supplier options

Procurement and scheduling

Kinect Energy has experienced procurement and credit and contracts teams to ensure you have the most competitive portfolio of suppliers. With the combination of enhanced price risk management and an expanded supplier portfolio, we continue to develop unique supply products that address the requirements of ethanol producers.

Risk management

Kinect Energy has recently expanded our price risk management team and service offerings. Typical risks such as weather, limited capacity and storage affect both volatility and price. We align risk with your plant's objectives and risk tolerance. Kinect Energy is active on prevailing online platforms important to effective risk management. We have obtained appropriate certifications through the National Futures Association.

Regulatory

Kinect Energy has increased our presence in the regulatory space and is actively utilizing the power of our client base to organize like-minded companies in utility and pipeline rate interventions.

Efficiency improvements

Kinect Energy has access to top engineering firms that provide energy audits to help you drive down your electricity and natural gas usage. This helps reduce both carbon footprint and cost.

Onsite generation

Are your electric rates becoming excessive? Kinect Energy can help with comparative analysis of alternative power including solar generation and onsite Combined Heat and Power (CHP). The cost of capital for solar energy is coming down significantly. Kinect Energy can help create and analyze alternatives for solar energy; having your own solar installation or participating in a public solar garden.
