

Leading provider of fasteners reduces water bill and becomes more water efficient

INDUSTRY

Manufacturing of fastening solutions

LOCATION

UK

OVERVIEW

World Kinect Energy Services worked with SFS Intec Ltd, a leading provider of precision custom components and special fasteners, to help it become more water efficient, leading to a saving of 30% off its water bills. World Kinect's water team analysed SFS Intec's water bills and identified a number of discrepancies. Following this they carried out negotiations with the water supplier, which resulted in an £18,000 refund for historical overcharging. On top of the refund, World Kinect Energy Services also managed to secure an annual saving of over £2,500 going forward.

OUR SOLUTION

SFS Intec Ltd, part of the global SFS Group, has been developing, manufacturing and distributing fastening solutions to the construction industry from its UK site in Leeds for over 100 years. World Kinect Energy Services specialises in helping businesses save money through analysing their utility bills, by carrying out audits on their water, gas and electricity. Its specialists can also identify areas where clients are overconsuming and make recommendations on how to reduce future utility bills.

We have been using World Kinect Energy Services for a few years to help us get a good deal on our electricity and gas supply so when they offered a water audit I readily agreed. The process was quick and easy and I would not have known where to start if I had tackled it myself."

Ian Morgan,
UK Supply Chain & Procurement Manager, SFS Intec
